Presentation

Our design teams use all their creative talent and expertise to boost out customer's creativity.

Our teams are here to assist them with all their customization projects' however simple or bespoke, and help them stand out from the crowd.

The sales teams are the first to hear our customers' ideas, which is why we have created this Shape Book.

TECHNICALS

Our technologies' technical characteristics

Stencil : A chocolatier's template that helps to make many different glossy shapes but still achieve a handcrafted look. The chocolate can be very thin.

Characteristics : Handcraft look (sizes can vary from product to product) with a very delicate, glossy finish. Many different shapes are possible. A few pock marks and tiny air bubbles may appear. The product is very fine, which means it may be fragile.

Cut-out : Technique which creates moderately fine, high-gloss bars with sharply defined angles, as well as precisely engraved chocolates.

Characteristics : Geometric precision, delicacy and gloss. The product is very fine, which means it may be fragile.

Recommended use : Place finished products reverse-side down.

Blister : Thermoforming technique for molding decorations into various shapes. These are perfectly identical and regular, offering a beautifully delicate finish.

Characteristics: Uniformity and evenness. Pieces are delicate and easy to turn out. Rounded edges. Air bubbles may appear in corners, bloom may appear in colored areas and traces of color may appear on back.

Recommended use : Follow the directions and storage instructions provided.

Structured sheet (Creaform) : Thermoformed PET sheet which can be used to add texture to products such as chocolate, ice cream and mousse.

Characteristics : Usable with several types of products and formats (yule logs, bars, chocolate bonbons, desserts, etc...).

Transfer : A way of transposing a design using a mixture of cocoa butter (and possibly white chocolate) and one or more colorants, depending on the desired number of colors.

Characteristics : Glossy. Usable with several types of product (mousses, shortcrust pastry, chocolate, chocolate bonbons, etc.).

Recommended use : Follow the directions and storage instructions provided.

Water-Jet Cutting : A technique for cutting materials using high-pressure water jets.

Characteristics : News neat and highly precise technology. 100% chocolate. Handcrafted texture. Fragile due to pieces' delicacy.

Rotational molding : Molding technique that allows us to create hollow 3D decorations such as Easter eggs.

Characteristics : Reversible, 3D, fragile.
